

Nvidia - plik konfiguracyjny

Położenie: /etc/modules.d/nvidia

© 3bird.net 2006, <http://3bird.net>

Nvidia drivers support

alias char-major-195 nvidia

alias /dev/nvidiactl char-major-195

To tweak the driver the following options can be used, note that you should be careful, as it could cause instability!! For more option see /usr/share/doc/nvidia-kernel-1.0.6111-r3/README.gz

To enable Side Band Addressing: NVreg_EnableAGPSBA=1

To enable Fast Writes: NVreg_EnableAGPFW=1

To enable both for instance, uncomment following line:

options nvidia NVreg_EnableAGPSBA=1 NVreg_EnableAGPFW=1

If you have a mobile chip, you may need to enable this option if you have hard lockups when starting X.

See: <http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=343186>

#option nvidia NVreg_Mobile=1
